#### Independence

Rapid and immediate identification of paper money without having to depend on anyone

#### Confidence

The ultra-high accuracy of the iBill provides peace of mind

#### Convenience

The compact iBill goes everywhere - in the pocket, purse or clipped to the belt and with its long battery life and power-efficient design, is always ready for use

#### Affordability

The iBill is THE most affordable banknote identifier

#### Enhanced Ease of Use: The new iBill now offers

- Increased volume - making it easier to use in noisy places and for users with hearing difficulties
- New option for privacy - An Earphone Jack provides an alternative to the vibration mode
- A redesigned slot that makes it even easier to insert the bill, and recessed buttons prevent inadvertent activation when the unit is in a purse or pocket

## Identifying the denomination of paper money can be a challenge for the visually impaired...

## The new iBill now makes it simple and fun!

There are many occasions when it is necessary for a visually impaired person to identify the denomination of paper money, such as when receiving change at a store or in a taxi. To make this possible in a convenient, simple, fast, accurate and affordable way, Orbit Research developed and introduced the revolutionary iBill in 2009.

We now bring you the second generation model, with added features that make it even better!

The new iBill retains the key-fob design and its sleeker, more rounded shape is even more convenient to carry in a pocket, purse, or attached to a keychain or lanyard. A custom leather case is also available providing protection and the ability to clip on to a belt or purse strap.

The new iBill now offers enhanced volume, an earphone jack, a much simpler to use insertion slot as well as recessed buttons to prevent inadvertent activation.

Like the first generation, the new version maintains the features that set the product apart from the competition: ultra-high accuracy (better than 99.9%), super-fast speed (less than one second to identify a bill in most cases), compactness and affordability (it is still several times cheaper than other such devices).

The redesigned bill slot makes inserting a banknote even more intuitive and easier, and the enhanced volume is especially useful for seniors. As before, the denomination is announced at the press of a button in a clear natural voice, by a pattern of tones or through a pattern of vibrations for privacy. The vibratory mode also enables the use of the iBill by people who are deaf-blind.

## Features

- Extremely easy to use and ready at all times - identifies at the press of a button
- Provides instantaneous response — most bills are identified in less than one second
- Recognizes all US bills in circulation - \$1, \$2, \$5, \$10, \$20, \$50 and \$100
- Announces denomination in a clear female voice; tone and vibration modes protect privacy
- An earphone jack provides additional privacy
- Super-long battery life - over a year with typical use; single AAA battery is easily replaceable by the user
- Attaches to a key-chain or lanyard; comes with an installed key-ring
- Easily upgradeable to recognize new banknote designs
- Clearly indicates un-identifiable bills, e.g. torn or badly defaced ones - does not incorrectly identify them
- Ergonomic, user-friendly design provides ultimate ease of use - has just two buttons, recessed to prevent inadvertent presses
- Durable, heavy-duty plastic (polycarbonate) construction — suitable for everyday use
- Supplied accessories include installed battery, user manual in large print audio and digital soft-copy
- One year warranty covering manufacturing defects
- 30-day money back guarantee
- Toll-free customer support
